Software Engineer | Backend (cid:127) Full Stack (cid:127) AI

Highly motivated Software Engineer with strong expertise in backend development, scalable systems, and AI-driven applications. Experienced in designing high-performance APIs, optimizing system architecture, and building production-ready applications. Passionate about solving real-world problems with clean, efficient, and maintainable code.

WORK EXPERIENCE

AfroChat (Esklate)

01/2023 - 01/2025

Backend Engineer

- Designed and scaled a real-time messaging architecture handling high concurrent users.
- Reduced API latency by 35% through migration to async FastAPI and optimized database queries.
- Improved deployment efficiency by 20% using CI/CD pipelines and Docker automation.
- Built internal tools that improved developer productivity and reduced build time by 40%.

Esklate

01/2020 - 01/2021

Full Stack Developer Intern

- Developed automation systems integrating Slack and Google Sheets, improving team productivity.
- Built scalable background job processing using Redis and Celery.
- Created real-time dashboards for analytics and decision-making.
- Implemented Kubernetes-based deployment improving scalability and reliability.

EDUCATION

BSc Software Engineering

American College of Technology • GPA: 3.79

AWARDS & SCHOLARSHIPS

Winner – Ethiopian Competitive Programming Contest

01/2024

PROJECTS

GulitApp (Digital Market System)

- Built a bilingual marketplace platform to digitize traditional market operations.
- Implemented real-time product updates, cart system, and user-friendly interface.
- Focused on usability, scalability, and local market adaptability.

AI Recommendation System (Bazar)

- Developed ML-based recommendation engine improving suggestion accuracy by 40%.
- Integrated real-time data scraping and analytics pipeline.
- Applied clustering and collaborative filtering techniques.

Code Execution Platform

- Built multi-language code execution system supporting real-time compilation and testing.
- Designed cloud-based execution environment for scalability.

SKILLS

Languages: C++, Go, Java, JavaScript, Python, SQL

Frameworks: FastAPI, Flutter, Next.js, React

Tools: Docker, Git, GitHub Actions, Jenkins, Kubernetes, PostgreSQL, Redis

Concepts: AI/ML, CI/CD, Distributed Systems, Microservices, System Design, TDD
